OTOMASYON

OUR SOLUTIONS & SERVICES

- Automation Solutions
- Data Collection and IoT Solutions
- Augmented Reality (AR)
- MES-MOM Solutions
- Machine and Safety Automation
- Eccentric and Hydraulic Press Automation
- Transformer Fan Control Panels
- Transformer Tap Changer RTCC (AVR) Panel
- L.V Distribution and Lighting Panels
- Compensation Panels
- Motor Control (MCC) Panels
- Electric Meter Panels
- Electrical Project and Design
- Panel Manufacturing and Assembly
- Panel and Field Labeling Solutions

EPM
OTOMASYON

EPM
ELEKTROMARKET

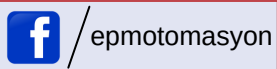

With the experiences gained from the past, our sole proprietorship was established in 2011 with the aim of providing the newest and highest quality service. Our company changed its title to Epm Otomasyon ve Endüstriyel Pano Çözümleri Elektrik San. Tic. Ltd. Şti. as of January 3, 2014. Maintaining continuous dialogue with our valued customers and providing quality and contemporary service are among the first principles of EPM OTOMASYON.

Since 2011, in the automation and industrial panel (electrical assembly, PLC, SCADA, project design, field applications, process, etc.) sector, we have been expanding our mission of being the bridge of technology with increasing R&D and production activities. We support this change with our new corporate identity. We thank our customers and valuable business partners who have supported us to reach where we are today, hoping for their continued support.

EPM OTOMASYON is an engineering company that integrates customer needs and expectations into every stage of its work, continuously renewing itself to meet desired standards. Committed to providing the most accurate solutions at the most competitive prices, EPM Otomasyon adheres to honest and reliable trade principles.

EPM OTOMASYON is an industrial facility's;

- Supply of all electrical, electronic and automation materials,
 - Commissioning of systems,
 - Providing of pre-sales and post-sales support for systems and products;
 - Preparation and implementation of power and control projects related to electrical, electronic, and automation systems,
 - Preparation and implementation of power factor correction systems and harmonic filtering systems and projects,
- continues its efforts in these areas.
